

Using Groupwise Email: Autofill

Are you having a problem because the autofill in Groupwise email keeps finding your keyboarding mistakes?

In the example below, at some time, I typed Bonnie McNamara's email address with an extra r at the end. That email address gets saved and then autofills when I type in the beginning of her address. When I send her that email, Groupwise then "bounces" it back.

To fix this:

1. Go to your **Address Book**.
2. Choose your Frequent Contacts Address Book. Click **Search**.
3. Find the mistyped addresses, put a check mark in front, and click delete.
